

*Illegally dumped tires that collect stagnant water provide an excellent habitat for mosquitoes to hatch. Recently, the Hudson Regional Health Commission's Mosquito and Vector Control Division and the Hudson County Parks Department collected more than 20 tons of abandoned tires throughout the county. Partnering with the HCIA's Environmental Programs Division, these tires were removed and properly disposed of - preventing a serious health hazard. Please do your part and dispose of your old tires properly. Contact the Hudson County Improvement Authority at **1-800-540-0987** for more information.*
